3. When creating a spine file create a new document file and set the trim size to 1" wide by the actual height of the publication. Center the spine copy/image in the document and make sure the image or color on the spine is at least .125" wider than the actual spine width and there is .125" bleed on the top and bottom. If there is an image that wraps across the spine and front cover be sure that it lines up correctly.

Spine Width
